Introduction: Who is Profyta and what do we do, done by Martin Koome

Collect challenges faced by farmers in greenhouse production as listed:

- Diseases
- YPR management
- Nematode
- Water Challenges
- Lack of technical skills
- Poor greenhouse management
- Poor choice of varieties

Learning how to Make Mtumbwi system.

Nursery Management: Team having a discussion on Nursery management

Green house management for better production

- Use of Rice husks to bring down Tuta levels
- Proper disinfection of water
- Farmers do not know what EC meter is
- Use of sensors
- Nursery management
- Use of pest Traps
- High Standards of Hygiene
- Double shoot for higher yields

Discussions;

- Farmers to change their ways and produce in a smarter way
- Farmers ready to start using Mtumbwi
- Farmers want to know when profyta varieties will be in the market

Conclusion:

- Profyta to offer technical support for farmers to get started with Mtumbwi
- Fintrac to identify 2 farmers who will be using the sensors, profyta to provide sensors and train farmers on how to use them
- Fintrac, to offer transport for field visits by Profyta team to farmers to assess their facilities and advise on Mtumbwi and Phyosanitary measures.
- SAGCOT is the link and coordinator of Fintrac, Government and Profyta and ensure all is going as planned.
- Farmers visit planned on the 27th and 28th May.
